Dono Artyk

DevOps Engineer · AWS · Kubernetes · Terraform · CI/CD · GitOps · Agentic AI

Chicago, IL · Open to relocation · artykdono@gmail.com · linkedin.com/in/dono-artyk · artdono.github.io

SUMMARY

DevOps Engineer with 5+ years of experience across AWS and Kubernetes, with a recent focus on building agentic AI engineering workflows using Claude Code and MCP. Designs and operates shared production platforms that abstract infrastructure complexity from application teams while standardizing how workloads are deployed, secured, observed, and operated.

PROFESSIONAL EXPERIENCE

Uptake – Industrial AI & Predictive Maintenance SaaS

Chicago, IL

DevOps Engineer Jul 2023 – Present

- Built Claude Code and MCP-based PR review automation used across 30+ repositories and 400+ pull requests — checks changes against Jira requirements and surfaces code, security, and exposed-secret issues before human review.
- Replaced ingress-nginx with Kubernetes Gateway API (HTTPRoute) and AWS Load Balancer Controller across 5 application teams, standardizing production traffic on Gateway API and retiring the legacy ingress controller through weighted Route 53 cutovers and connection draining.
- Owned cert-manager, external-dns, and Secrets Store CSI Driver across multi-tenant production EKS — automated DNS-01 certificate issuance and ACK-based ACM management, and moved 8 services to IAM-scoped runtime secret mounts.
- Built HA Prometheus/Grafana/Alertmanager for non-production, reducing Datadog licensing spend by ~$31K/year; established 99.9% availability SLOs and multi-window burn-rate alerting, cutting PagerDuty page volume by 45%.
- Ran ArgoCD App-of-Apps and Helm delivery across 5 application teams, giving 20+ engineers Git-based releases, automated drift detection, and a repeatable rollback path across the shared EKS platform.

Okta – San Francisco, CA

DevOps Engineer Apr 2022 – Jun 2023

- Replatformed infrastructure supporting 40+ containerized EKS microservices from legacy CloudFormation stacks to reusable Terraform modules, completing cluster and private-node cutovers with zero downtime.
- Replaced static AWS credentials across 45+ GitHub Actions pipelines with short-lived, least-privilege IAM roles through OIDC federation.
- Moved Lambda, API Gateway, and DynamoDB infrastructure from AWS CDK to Terraform, bringing serverless resources under the same IaC workflow while integrating Okta Identity Engine authentication through OAuth 2.0/OIDC.
- Containerized a legacy Flask/MySQL production application and migrated its 4 services from Docker Compose to Kubernetes with persistent EBS-backed storage.

Cloud Engineer Jan 2021 – Mar 2022

- Automated AWS account provisioning across 35+ accounts with Control Tower and Service Control Policies, cutting environment setup from 3 days to under 2 hours.
- Removed 10+ hours of weekly operational toil with Python/boto3 and Ansible automation for cross-account S3 lifecycle management and patch-compliance workflows.
- Brought unmanaged VPC networking, IAM deployment roles, and S3 infrastructure into Terraform modules and state, replacing manual cloud changes with repeatable IaC and drift detection.

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (EKS, EC2, VPC, IAM, Control Tower, Route 53, S3, SSM), Kubernetes, Terraform, Helm, Docker, Linux

CI/CD & GitOps: ArgoCD (App-of-Apps), GitHub Actions, AWS OIDC, Gateway API, AWS Load Balancer Controller, ACK Controllers

Platform Security: cert-manager, external-dns, Secrets Store CSI Driver, AWS IAM, SCPs, OAuth 2.0/OIDC, Okta Identity Engine

Observability & Reliability: Prometheus, Grafana, Alertmanager, Datadog, CloudWatch, PagerDuty, SLOs, burn-rate alerting

AI & Automation: Claude Code, Model Context Protocol (MCP), custom agent skills, agentic workflows, Python (boto3), Bash, Ansible

CERTIFICATIONS

Certified Kubernetes Administrator (CKA) · Certified Kubernetes Application Developer (CKAD) · AWS Certified Solutions Architect – Associate · HashiCorp Certified: Terraform Associate
